

eConsent Increases Efficiency, Satisfaction, and Quality

While significantly lowering costs

AGILE CONSENT

Five Advantages of AgileConsent

1. Lower costs
2. Improved physician and staff efficiency and satisfaction
3. Greater patient convenience and satisfaction
4. Increased speed, accuracy, and quality
5. Reduced liability

A 300-bed hospital could save over \$4 million dollars per year

Is your organization still using paper-based patient consent forms? If so, you are wasting time and dollars while frustrating clinicians and patients with cumbersome processes.

Most organizations use tens or hundreds of thousands of consent forms each year. Learn why switching from paper to an electronic consent (eConsent) solution is so beneficial.

AgileConsent is a leading eConsent platform that enables you to see dramatic improvements in efficiency, physician and patient satisfaction, care quality and liability risks. We can save you thousands or even millions of dollars each year on administrative, surgical, and/or other consent forms, depending on your volume.

How It Works

AgileConsent enables your organization to create, send, sign and track all consent forms— securely, quickly, and painlessly. Our platform uses open architecture to make it easy to integrate with any EMR or other IT system. Nurses, surgeons, anesthesiologists and HIM staff can access and process consent forms within their existing workflows because all patient and treatment information is presented digitally.

Our user-friendly solution can run on any device, anywhere. It includes an extensive database of surgical procedures that articulates risks, benefits, and alternatives, with dropdown menus and other features that minimize clicks and maximize convenience. We merge surgical data with your consent template(s) to create a PDF ready for eSignature that can be signed by:

- Performing surgeons
- Explaining practitioners
- Patients

Five Reasons to Use AgileConsent

Organizations can quickly see benefits in five areas:

1. Lower costs

Printing and handling each paper consent form typically costs five to eight dollars. By contrast, each AgileConsent form costs only about a dollar, and per-form costs decrease as the platform is more efficiently used.

- An organization that processes 100,000 forms/year could save over \$400,000
- A mid-size hospital that processes a million forms/year could save over \$4 million

AgileConsent Advantages

- A user-friendly, mobile-ready interface
- Cloud based
- Seamless integration with all EMRs and back-end systems in real time
- Secure, end-to-end, HIPAA-compliant forms
- A web-responsive design that enables signatures from any mobile device or desktop
- Integrates with multiple eSignature providers
- Prebuilt, customizable database for any surgical specialty
- Clinical, administrative, and research consents
- Multi-lingual consent capabilities
- Customizable workflows
- Analytics module with customizable dashboard, alerts, and reports
- Responsive support and professional services

AgileConsent also saves money by enabling organizations to modify forms dynamically without having to reprint them or lose version control. That's priceless.

2. Improved physician and staff efficiency and satisfaction

AgileConsent eliminates the need for physicians to re-enter consent information for each patient. Instead, key information, such as surgical benefits, risks, alternatives, laterality, and attachments, can be automatically populated to the consent form. We also make it easy to customize the consent for higher-risk patients, such as those with a co-morbid condition.

3. Greater patient convenience and satisfaction

Most patients today prefer and expect the convenience of electronic forms. AgileConsent enables them to sign forms at any time or place, including healthcare settings, home, or on the go. And our web-responsive design allows patients to sign their consent form(s) on any desktop or mobile device. Plus, patients find our forms easier to read and understand.

4. Increased accuracy, speed, and quality

AgileConsent eliminates errors caused by manually entered information. It also prevents lost or misfiled forms, which reduces delays and improves the timeliness and quality of care. For example, ED patients needing surgery can have their forms immediately and securely sent to the OR, preventing delays.

5. Reduced liability

Digital signatures are as legally binding as hand-written signatures. They also enable clinicians and administrators to document, track, and analyze precisely what was explained to patients – reducing liability by providing proof that consent discussions have taken place. Our auditing capabilities also enable organizations to manage and report changes in consent forms for auditing, compliance, quality, and safety purposes.

Learn More

Since 2016, Agile Consent, a leading electronic consent platform has been used to securely and efficiently consent thousands of patients. For more information, contact us at AgileConsent@harriscomputer.com or 888-39-NOVUM | 888-396-6886.
